Everybody Into the Pool!

Overview

- Dipping Our Toes In
- Learning To Swim
- Into the Blue With Express & Azure and Off the Ledge with Edge

Everybody Into the Pool!

Part 1: Dipping Our Toes In

- What Is Node.js?
- When Should It Be Used?
- When Shouldn't It Be Used?
- Why Would a .Net Developer Want to Learn Node.js?

What Is Node.js?

Node.js is a platform built on Chrome's JavaScript runtime for building fast, scalable network applications. Node.js uses an event-driven, non-blocking I/O model that makes it lightweight and efficient.

"JavaScript ... for fast, scalable network applications"

- Fast
 - JavaScript runs in Chrome's V8 engine
 - V8 and Node.js written in C
 - Minimal feature set "baked in"
- Scalable
 - No multi-threaded overhead
- Network
 - http, dns, net, querystring, url

"Non-blocking I/O model"

Blocking Example: The ATM

"Non-blocking I/O model"

Node.js in a Nutshell...

- Fast, scalable, network apps
 - Chrome's V8
 - · Modules focused on scalable networking
- Non-blocking
 - Designed to be asynchronous
- Event-driven
 - Events, call-backs and event loops

Use Cases

What is it good for?

- Real-time web
 - Chat apps, stock tickers
- The glue
 - REST servers, message queue
- Input/Output
 - File uploading
 - Streaming of data
- Serve large amounts of clients
 - Ad server
 - IoT

What isn't it good for?

- CPU intensive work
- Non-I/O
- Just because it's cool

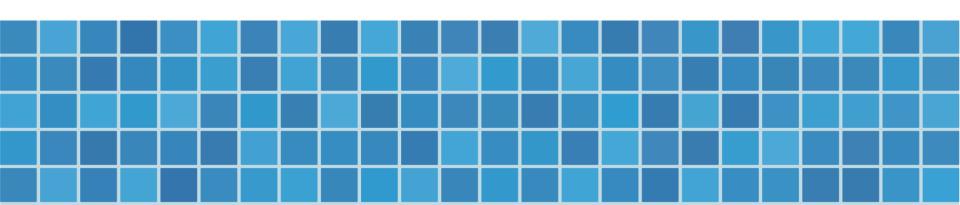

Why Node.js For .Net Developers?

- Teaches us how to handle async
- Javascript is lingua-franca
- Microsoft & keep existing investments
- Great community developing node modules
- Give clients more choice

Everybody Into the Pool!

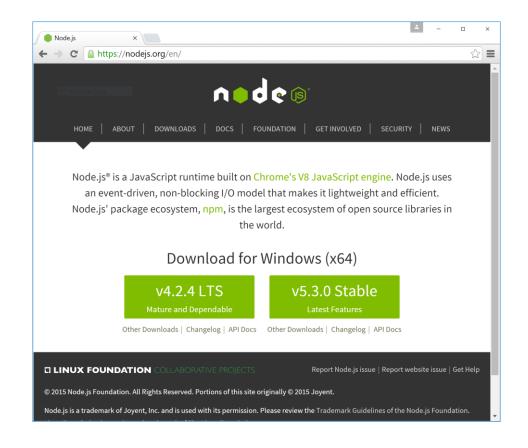

Part 2: Learning To Swim

- Installing Node.js
- npm
- Node.js Tools For Visual Studio
- Jump Into the Water With a Demo

Installing Node.js

- http://nodejs.org
- Download installer package

Installing Node.js

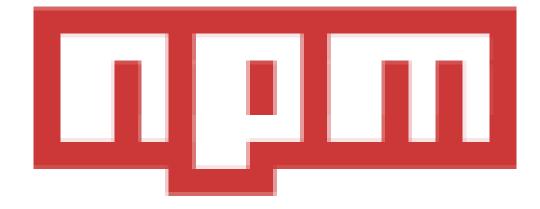

- http://chocolatey.org
- Machine Package Manager
 - NuGet for applications!

C:\> choco install nodejs.install

npm Package Management

- Package manager
- ~ NuGet for JavaScript
- 220,000+ modules

http://npmjs.com

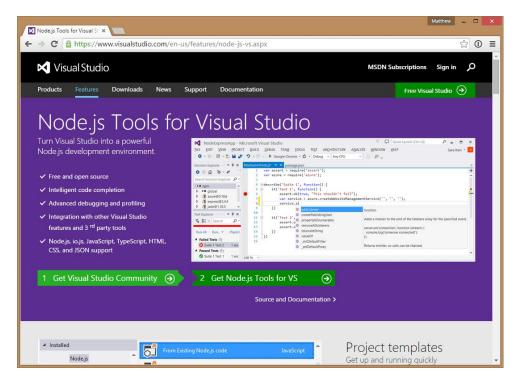

Handy Modules For the .Net Dev

- express
 - Middleware
- restify
 - REST services
- edge
 - Call .Net functions from Node.js and Node.js functions from .Net
- node-sqlserver
 - Microsoft's driver to access SQL Server from Node.js
- azure
 - Access to many of Azure's services

Node.js Tools for Visual Studio

- Project templates
- Intellisense
- Debugging
- Profiling
- RFPI
- Unit testing
- npm integration

Visual Studio 2012 +

http://aka.ms/explorentvs

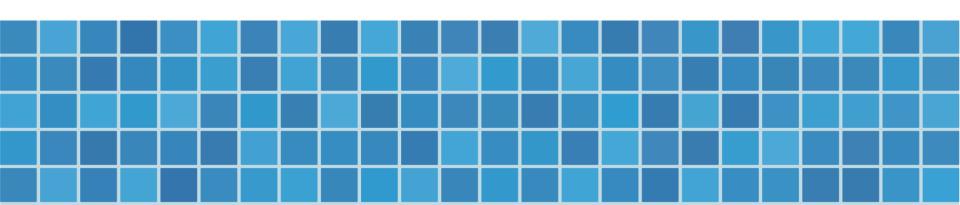

Look mom, I can swim!

Everybody Into the Pool!

Part 3: Into the Blue With Express & Azure and Off the Ledge with Edge

- Express.js Minimal Middleware
- Azure's Node.js Functionality
- Deploying Web Apps Into Azure
- Edge.js Invoking .Net From Node.js

Express.js

Middleware for Node.js

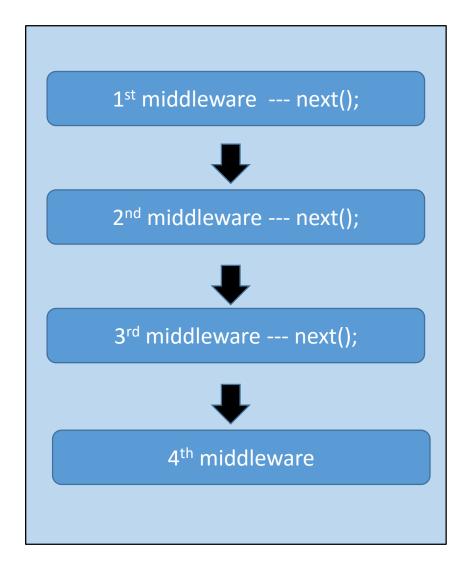

- Web Application Framework
- Can Compose Middleware Functions
 - Middleware = request handler chaining
- Minimal and Lightweight
- Many Plugins Available
 - Routing, Logging, Error Handler, Template Engines

Express.js

Middleware

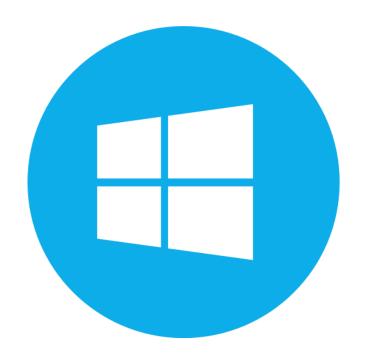

- Functions executed one after the other
- Can access request & response variables
- 3rd party or write your own

What Can Azure Do With Node.js?

Host Node.js Applications

- Web Apps/Sites
- Azure Mobile Services
- Cloud Services
- Virtual Machines
- Including npm modules!
- Specific Azure modules!

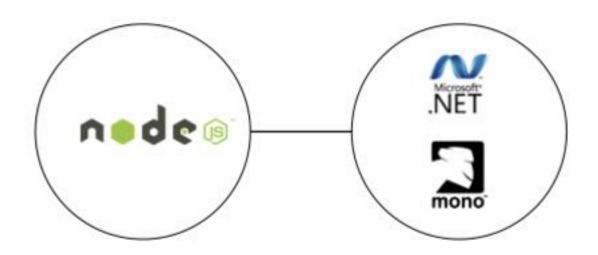

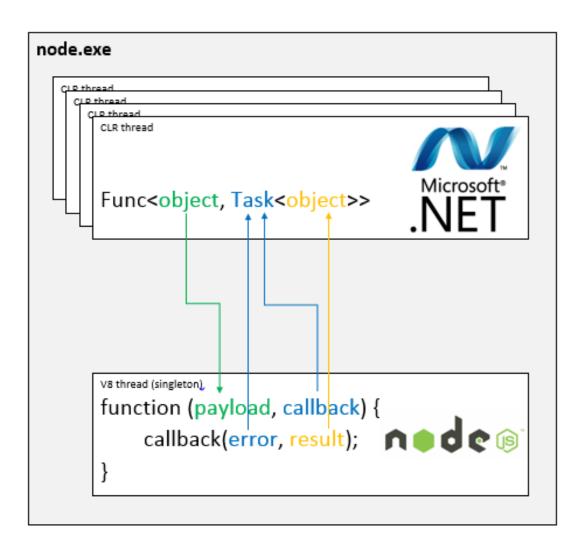

Where Is Matt Swimming ... With Express In Azure!!

Edge.js

- Allows us to invoke .Net code from Node.js (and vice versa)
- Inline C#
- C# files
- Compiled DLLs

Dropping Off The Ledge ... With Edge.js

The Future – Node.js 4/5

- From 0.12 to 4.0 ... what?
- Merge with io.js
- Uses latest V8 engine
- Faster!
- Can use ES6
- Long term support plan

Where To Go From Here?

- Dive In!
- Node.js can be the glue
- Node.js can be microservice
- Node.js can invoke .Net

Toweling Off

- Node.js fast, non-blocking, event-driven
- Full support in Visual Studio
- Express and Azure
- Edge and .Net code reuse
